

SPACE-RAY®

SURA Plus

High Intensity Halogen Infrared Heaters

- 2 variable heat capacities 1.2 – 2kW and 2.4 – 4kW with 5 Power Levels using the hand remote
- Fashionable Design to fit the Aesthetics of any Restaurant or Café
- IP55 Weather Proof
- Custom Design Parabolic Reflector with Minimum Energy Loss
- Made from Corrosion resistant and robust materials

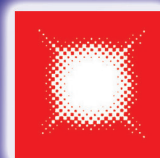

2000w

4000w

SPACE-RAY® Heating Systems

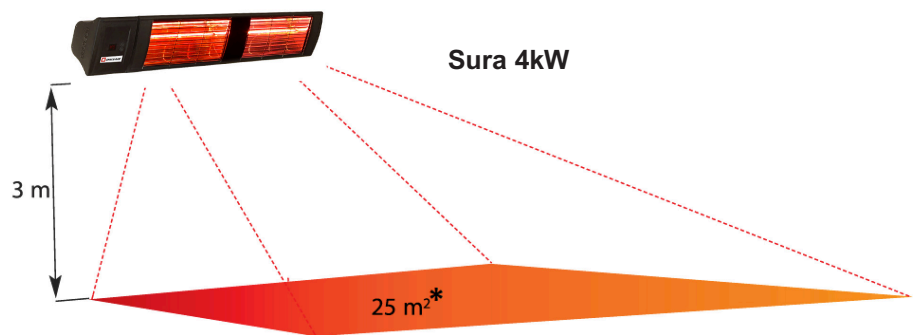

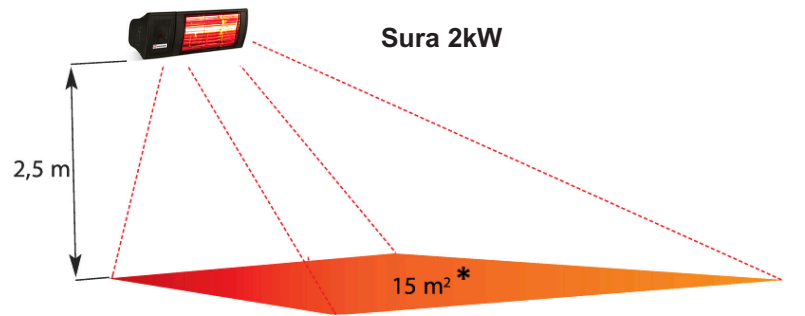

Technical Specifications

CODE	CAPACITY (kW) <small>5 power levels</small>	DIMENSIONS (mm)	WEIGHT (kg)	CURRENT (A)
GSS20P	1.2 – 2	555x166x95	2.8	8.7
GSS40P	2.4 – 4	960x166x95	4.1	17.4

The Advantages of Short Wave Heaters

The shortwave heaters are more efficient for outdoor heating and spot heating, due to their nature of travel through air. By this method, a smaller capacity heater (i.e. by using less energy) it is possible to achieve more effective heating. Other advantages are also listed below

ADVANTAGES	
Instant Heat	> 90% emission within 1 second
Safe	Quartz envelope, heat shock resistant
Clean	No by products, no pollution
Economic	85% of consumed energy transmitted into infrared heat
Fully Dimmable	Fully controllable (0% to 100%)
Can Be Used With Passive Infra-Red	On/Off switches do not affect life time of the elements
Low Maintenance	Long life: 5,000 hours
Heat Can be Focused by Reflectors	Same optical properties as light, can be directed
Compact Heater	Compact heat source, narrow diameter of lamps

* These figures may vary depending on the conditions like wind, strength, indoor usage, outdoor usage etc.
